

Experimental exploration of attention in preferential choice

C. E. R. Edmunds
University of Warwick

Abstract

Keywords: attention, preferential choice, decision making

Experiment 1

Method

Participants. We had a lot of people in this study.

Materials. Several materials were used for this project. Some of them were already created for prior research.

Design. This section describes the study's design.

Procedure. The procedure was fairly straightforward, yet required attention to detail.

Data analysis. Experiment 1 was pre-registered at .

Results

Table ?? contains some sample data. Our statistical prowess in analyzing these data is unmatched.

Experiment 2

Participants. We had a lot of people in this study.

Materials. Several materials were used for this project. Some of them were already created for prior research.

Design. This section describes the study's design.

Procedure. The procedure was fairly straightforward, yet required attention to detail.

Data analysis. Experiment 2 was pre-registered at

Results

Table ?? contains some sample data. Our statistical prowess in analyzing these data is unmatched.

Discussion

This is a lengthy and erudite discussion. It demonstrates amazing skill in interpreting the results for the masses.

Open Science Declaration

Both experiments were preregistered (see above). In addition, the data and analyses files are available by the Open Science Framework at .
